DETAILED ACTION

Response to Arguments

Applicant's arguments filed 10/05/2004 have been fully considered but they are not persuasive. Applicant argued that Wilson does not provide 'reliable datagram service'. The argument is not persuasive because the term 'reliable datagram service' is merely a label or intended result.

Applicant amended the claims to recited "implementing a reliable datagram service between the source device and the destination device." This serves nothing more than setting forth the intended result accomplished by the functional limitations recited in the body of the claims. The 'reliable datagram service' is the processes and structures recited in the body of the claims. Hence, the amendment does not add any new functional or structure limitation to the claims. Wilson teaches a system with all the structures and functions as claimed. Therefore, Wilson also implements 'reliable datagram service' as claimed.

Datagram service is the transmission of self-contained packets. The packets are independent of each other. They do not require acknowledgement or sequencing. (See Dictionary of Computers, Information Processing & Telecommunication's definition of a datagram attached herein.) A data stream

Art Unit: 2152

service, as oppose to a datagram service, is a transmission of a continuous sequence of packets. The packets are related; that is the packets are in sequence with one another.

Applicant's 'reliable datagram service' according to the specification is the sequential packetize and transmission of data. Packets are acknowledged and are ensured to receive in sequence. Therefore, Applicant's 'reliable datagram service' is actually performing a data streaming service.

Wilson discloses a simple transport protocol (STP) that provides 'datagram' and 'data stream' services. Wilson's 'data stream service' performs essentially all functionalities recited in the claims and achieves the same end result as the present invention - reliable transport of a sequence of packets over an IP network without utilizing TCP. Applicant chooses to label it as a 'reliable datagram service'. Wilson chooses to label it as a 'data stream service'. Both services perform essentially the same function the same way. Hence, Wilson's 'data stream service' anticipated Applicant's 'reliable datagram service' as claimed.

Claims 1-45 are rejected as stated in the prior office action.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
